Gainesville, Georgia 30506

Dear Sir,

I recently tested your heavy duty storm windows installed in my house. I did three test.

1. I fired 22 long rifle cartridges from a Browning rifle at 25 feet, the bullets penetrated the first layer never penetrated the window on the opposite side.
2. I fired a 12 gauge shotgun with high brass #8 shot from 25 feet. While the shot penetrated to the back of the window they were eaten up by the glass and not powerful enough to dent a piece of plywood placed behind the window.
3. I fired three 45 caliber pistol bullets, standard 230 grain ball ammunition, from 25 feet. After penetrating the window the bullets were not strong enough to penetrate the plywood behind the window.

Sincerely Yours,

Virgil L. Brown
